WORKING CURRICULUM OF THE DISCIPLINE  
(SYLLABUS)

Course: SFT6211 - Organization of database management systems

Group of educational programs: B058-Information security

Educational program: 6B06301- Computer security, 6B06302-Hardware security, 6B06303-Network security

Year: 3 Semester: 5 Number of academic credits: 4

Lectures: 15 hours

Practical work: 15 hours

Laboratory work: 15 hours

IWST: 15 hours

IWS: 60 hours

TOTAL: 120 hours

Cycle of discipline: Basic  
(General education/Basic/Major)

Form of control: Test

The working curriculum of the discipline (syllabus)  ) SFT6211 - Organization of database management system

has been developed on the basis of the educational program 6B06301- Computer Security, 6B06302- Hardware Security, 6B06303-Network security

The working curriculum of the discipline (syllabus) has been reviewed at the meeting of Cybersecurity department.

Minutes №  1  dated « 26 »  August  20  25

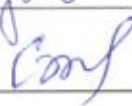

Head of the Department     Yeskendirova D.M.   
*signature* *full name*

Author     Dautbek M.O.   
*signature* *full name, title, degree*

The working curriculum of the discipline (syllabus) was approved at a meeting of the Faculty's Academic Quality Council.

Minutes №  1  dated " 29 "  August  20  25

Agreed:

Head of the Department of the Educational and Methodological activities     Ajibayeva A.   
Library     Серенбаева Н.   
*(Full name and position)*

| <b>2. Goals, objectives and learning outcomes of the course</b>  |   |
| <b>The course goal is learning the basic principles of designing database and work with database management systems</b>  |   |
| <p>The objectives of the course are to:</p> <ul style="list-style-type: none"> <li>– Understand Database Concepts: Learn key concepts such as data models, normalization, database architecture, and transaction management.</li> <li>– Design Databases: Gain proficiency in designing databases using Entity-Relationship diagrams and converting them into relational models.</li> <li>– Implement Databases: Develop skills in implementing databases using SQL and other database management tools.</li> <li>– Optimize Performance: Understand and apply techniques for optimizing database performance, including indexing and query optimization.</li> </ul>   |   |
| <b>Handle Real-world Scenarios: Analyze case studies to understand real-world applications and challenges in database design.</b>  |   |
| <p><b>Learning outcomes</b></p> <ul style="list-style-type: none"> <li>- Explain Fundamental Concepts: Clearly articulate key principles of database systems and their applications.</li> <li>- Design Efficient Databases: Create efficient and normalized database schemas based on given requirements.</li> <li>- Implement and Manage Databases: Build and manage databases using SQL and other relevant database management systems.</li> <li>- Analyze and Optimize Performance: Analyze database performance issues and implement optimization strategies.</li> <li>- Apply Knowledge to Real-world Problems: Apply theoretical knowledge to solve practical database design problems in various business or technical contexts.</li> </ul> |   |
| <b>Competencies:</b>   |   |
| <b>3. Course description</b>   |   |
| <p><b>Course Description:</b> In this course Organization of database management systems students will delve into the core principles of database systems, learning how to effectively design, implement, and manage databases. The curriculum covers essential topics such as data modeling, relational database design, SQL, and optimization techniques. Through a blend of theoretical knowledge</p>   |   |

and practical application, students will gain hands-on experience in creating efficient database systems. This course is ideal for aspiring database administrators, software developers, and IT professionals seeking to enhance their skills in database management. Upon completion, participants will be equipped with the knowledge and tools necessary to tackle real-world database design challenges in various professional settings.

#### 4. Методы преподавания

**Teaching methods:** The mastering of the course is supported by a combination of traditional, practice-oriented, and innovative teaching methods. This approach ensures the achievement of the discipline's objectives and contributes to the development of both theoretical knowledge and practical skills.

##### 1. Theoretical Methods

- 1. Lectures with multimedia presentations, case studies, and student participation.
- 2. Explanatory-illustrative, student explanation, group exercises, case diagrams, and case demonstrations.

- 3. Problem-based learning – formulation of problem questions and search for solutions together with students.

##### 2. Practice-Oriented Method

- 1. Laboratory works – development of practical skills in the use of database management systems, methods of data analysis, and data visualization.
- 2. Workshops and seminars – analysis of real-life cases, group discussions, presentations of student projects.
- 3. Project-based learning – development of small research or applied projects, teamwork, integrating acquired knowledge into practice.

#### 5. Course policy

Students are not allowed to use cell phones during classes, browse the social networks and play on-line games. Cheating will not be tolerated. Students caught cheating will receive a “0” for the assignment.

Attendance/participation is assessed based on the number of lessons attended by students. Each student must attend 80% of all lessons, or she/he won't be eligible to pass final exam.

The student gains points for each performed assignment, including laboratory works. If student misses classes, he/she will not be able to gain mark, unless he/she will perform and defend the assignment during office hours or additional classes. In case the student is not able to attend the lessons for some reason, he will be responsible for learning all material, which was learnt during unattended lessons. If the student did not attend more than half of the lessons without reasonable excuse, the teacher has a right to mark him as “not graded”, and the student will not be admitted to exam. Online platform MS Teams.

- platforms and services for conducting classes: Microsoft Teams, [platonus.iitu.edu.kz](https://platonus.iitu.edu.kz)

#### 6. Academic Integrity

##### - Plagiarism and Other Violations Policy

All forms of academic dishonesty are strictly prohibited. Plagiarism — the use of another person's work, ideas, or text without proper citation — is considered a serious violation of university ethics. This includes copying from other students, published sources, online materials, or AI-generated content without proper acknowledgment.

Students must submit only their own original work for laboratory reports, practical assignments, and independent projects. Any evidence of plagiarism, unauthorized collaboration, cheating during assessments, or falsification of data will result in disciplinary action, including a score of "0" for the assignment and potential academic penalties according to IITU regulations.

To maintain fairness, all written work may be checked using anti-plagiarism and AI-detection tools. The acceptable similarity index for written assignments is **no more than 20%**, excluding references.

- **Code of Academic Integrity (including the use of Artificial Intelligence)**

Students are expected to adhere to the following principles:

1. **Honesty and Responsibility**

- Perform all assignments independently unless group work is explicitly allowed.
- Use AI tools (e.g., ChatGPT, Copilot, etc.) only for learning support, brainstorming, or code explanation — *not* for full assignment generation.

2. **Ethical Use of AI**

- AI tools may be used to **improve understanding** of theoretical concepts, **debug code**, or **analyze database queries**, provided that the student can **explain and defend** all results.
- Direct submission of AI-generated reports, code, or SQL queries without modification, understanding, or citation will be treated as **academic misconduct**.
- When AI tools are used for assistance, students must include a **short note of acknowledgment** (e.g., "Assistance with syntax checking and explanation was received using AI tools").

3. **Transparency and Accountability**

- Each student must be able to justify and reproduce the results of their laboratory or project work upon request.
- Misrepresentation of AI-generated work as personal work undermines learning objectives and violates academic integrity standards.

4. **Respect for Others' Work**

- Proper citation of all references, including online tutorials, research papers, and code samples, is mandatory.
- Collaboration should promote mutual learning but not result in identical submissions.

|    | Part 6. Queries (individual topic, teamwork)                        |   | Supplementary [1]                   |        |                  |
| 6. | Practice 6: Project<br>Part 7. Defense (individual topic, teamwork) | 3 | Basic [1], [2]<br>Supplementary [1] | Report | Before midterm 2 |

### 13. List of topics/assignments for student's independent work

Proper organization of students' independent work is the key to the formation of skills in mastering, learning, assimilation and systematization of acquired knowledge, ensuring a high level of academic performance in the learning process.

| №  | Topic/Assignment title                           | Number of hours | References        | Form of reporting | Deadline         |
|----|--|-----------------|-------------------|-------------------|------------------|
| 1. | Comparative Study of SQL and NoSQL Databases     | 4               | Supplementary [1] | Report            | Before midterm 1 |
| 2. | Data Warehousing and Data Mining Techniques      | 4               | Supplementary [1] | Report            | Before midterm 1 |
| 3. | Implementation of CRUD Operations in MongoDB     | 4               | Supplementary [1] | Report            | Before midterm 1 |
| 4. | Performance Tuning in MySQL                      | 4               | Supplementary [1] | Report            | Before midterm 1 |
| 5. | Security Measures in Database Management Systems | 4               | Supplementary [1] | Report            | Before midterm 1 |
| 6. | Indexing and Query Optimization                  | 4               | Supplementary [1] | Report            | Before midterm 1 |
| 7  | Introduction to Oracle PL/SQL                    | 4               | Supplementary [1] | Report            | Before midterm 1 |
| 8  | Data Modeling with UML                           | 4               | Supplementary [1] | Report            | Before midterm 2 |
| 9  | Study of Transactions and Concurrency Control    | 4               | Supplementary [1] | Report            | Before midterm 2 |
| 10 | Database Backup and Recovery Strategies          | 4               | Supplementary [1] | Report            | Before midterm 2 |
| 11 | Study of XML and JSON in Databases               | 4               | Supplementary[1]  | Report            | Before midterm 2 |
| 12 | Big Data Analytics and Hadoop Ecosystem          | 4               | Supplementary [1] | Report            | Before midterm 2 |
| 13 | Cloud Database Management Systems                | 4               | Supplementary [1] | Report            | Before midterm 2 |
| 14 | Introduction to Distributed Databases            | 4               | Supplementary [1] | Report            | Before midterm 2 |
| 15 | SQL Injection and Database Vulnerabilities       | 4               | Supplementary [1] | Report            | Before midterm 2 |
|    |  |                 |                   |                   |                  |

### 14. Assessment criteria

The point-rating letter system for assessing the educational achievements of students with their interpretation in the traditional grading scale:

| Letter system assessment | The digital equivalent of points | Percentage content | Traditional system assessment | General description of grading criteria   |
|--------------------------|----------------------------------|--------------------|-------------------------------|---|
| A                        | 4,0                              | 95-100             | Excellent                     | The student has knowledge of the subject in the full scope of the curriculum, understands the discipline deeply enough; shows a high level of knowledge that exceeds the volume provided by the syllabus, gives an exhaustive answer    |
| A-                       | 3,67                             | 90-94              |                               | The student has knowledge of the subject in the full scope of the curriculum, understands the discipline deeply enough; gives an exhaustive answer  |
| B+                       | 3,33                             | 85-89              | Good                          | The student shows a complete, well-founded knowledge of the subject, but the answers did not always highlight the main idea, rational methods of calculation were not always used; the answers were mostly brief and sometimes unclear. |
| B                        | 3,0                              | 80-84              |                               |   |
| B-                       | 2,67                             | 75-79              |                               |   |
| C+                       | 2,33                             | 70-74              |                               |   |
| C                        | 2,0                              | 65-69              | Satisfactory                  | The student demonstrates sufficient knowledge of the subject, but without proper depth and justification, the answers are unclear and without proper logical sequence.  |
| C-                       | 1,67                             | 60-64              |                               |   |
| D+                       | 1,33                             | 55-59              |                               |   |
| D                        | 1,0                              | 50-54              |                               |   |
| FX                       | 0,5                              | 25-49              | Unsatisfactory                | The student demonstrates insufficient knowledge of the subject, positive answers were not given to individual questions.  |
| F                        | 0                                | 0-24               |                               | The student demonstrates a very low level of knowledge of the subject.  |

### 15. Assessment and evaluation materials (exam questions)

- What does SQL stand for?
  - Structured Query List
  - Simple Query Language
  - Structured Query Language
  - Sequential Query Language
- Which of the following is a NoSQL database?
  - Oracle

- B. MySQL
- C. MongoDB
- D. SQL Server

3. Normalization in databases is mainly used for:

- A. Increasing storage efficiency
- B. Improving performance
- C. Reducing data redundancy
- D. Enhancing security

4. Which SQL statement is used to extract data from a database?

- A. GET
- B. SELECT
- C. EXTRACT
- D. OPEN

5. What does 'ER' stand for in 'ER Model'?

- A. Entity-Relationship
- B. Efficient-Relational
- C. Entity-Revised
- D. Extended-Relationship

6. A primary key:

- A. Can be null
- B. Can contain duplicate values
- C. Uniquely identifies each record
- D. Can be a foreign key in another table

7. Which of the following is not a type of SQL join?

- A. INNER JOIN
- B. OUTER JOIN
- C. DIRECT JOIN
- D. LEFT JOIN

8. Which command is used to remove a table from a database?

- A. REMOVE TABLE
- B. DROP TABLE
- C. DELETE TABLE
- D. CUT TABLE

9. In a relational database, a relationship is established between two tables by:

- A. Primary keys
- B. Secondary keys
- C. Foreign keys
- D. Unique keys

10. What is the purpose of the 'HAVING' clause in SQL?

- A. To specify a condition for grouping records
- B. To join tables
- C. To sort the result-set
- D. To insert new records

**16. Introducing students to the syllabus**

I have read and agree with the requirements of the discipline «Organization of database management systems».

| <b>№</b> | <b>Full name of the student</b> | <b>Signature</b> | <b>Date</b> |
|----------|---------------------------------|------------------|-------------|
| 1.       |                                 |                  |             |
| 2.       |                                 |                  |             |
| 3.       |                                 |                  |             |
| 4.       |                                 |                  |             |
| 5.       |                                 |                  |             |
| 6.       |                                 |                  |             |
| 7.       |                                 |                  |             |
| 8.       |                                 |                  |             |
| 9.       |                                 |                  |             |
| 10.      |                                 |                  |             |
| 11.      |                                 |                  |             |
| 12.      |                                 |                  |             |
| 13.      |                                 |                  |             |
| 14.      |                                 |                  |             |
| 15.      |                                 |                  |             |
| 16.      |                                 |                  |             |
| 17.      |                                 |                  |             |
| 18.      |                                 |                  |             |
| 19.      |                                 |                  |             |
| 20.      |                                 |                  |             |
| 21.      |                                 |                  |             |
| 22.      |                                 |                  |             |
| 23.      |                                 |                  |             |
| 24.      |                                 |                  |             |
| 25.      |                                 |                  |             |
| 26.      |                                 |                  |             |
| 27.      |                                 |                  |             |
| 28.      |                                 |                  |             |
| 29.      |                                 |                  |             |
| 30.      |                                 |                  |             |
| 31.      |                                 |                  |             |
| 32.      |                                 |                  |             |
| 33.      |                                 |                  |             |
| 34.      |                                 |                  |             |
| 35.      |                                 |                  |             |
| 36.      |                                 |                  |             |
| 37.      |                                 |                  |             |
| 38.      |                                 |                  |             |
| 39.      |                                 |                  |             |
| 40.      |                                 |                  |             |
| 41.      |                                 |                  |             |
| 42.      |                                 |                  |             |
| 43.      |                                 |                  |             |
| 44.      |                                 |                  |             |
| 45.      |                                 |                  |             |
| 46.      |                                 |                  |             |
| 47.      |                                 |                  |             |
